

Side Opening Tambours

BISLEY

Bisley Side Opening Tambour Cupboards are designed to make the most of valuable office space and to provide an efficient and versatile storage solution.

The advanced design of the handrail provides a positive closing action with 3 point locking. All cupboards are fitted with superior, smooth action locks from a mastered series.

The quality solution for space efficient storage

Bisley is known throughout the world for quality storage products. The Side Opening Tambour Cupboards are built to last and have an aesthetic appeal that will enhance any office environment. The shutter design with matching handrail contributes to the smooth lines of all cupboards in the range.

Cupboards are available in five heights to meet all storage needs. The tallest cupboard can take up to seven rows of lateral filing and a roll out reference shelf.

A comprehensive range of internal fittings provides for the filing and storage requirements of every modern office.

Because tambour doors retract into the cupboard sides, they utilise less space and unlike conventional two door cupboards avoid causing obstruction.

Bisley Side Opening Tambour Cupboards are available in a range of 16 different carcass colours and four tambour finishes.

Advanced handrail design

Fully welded carcase

Planning storage to meet exact needs is easy

Bisley Side Opening Tambour Cupboards make it easy to plan storage to the needs of a particular application. Follow this step by step guide and refer to the illustration on the right and the order reference guide overleaf. You will then be able to identify the most appropriate fittings and the most suitable size of cupboards for your needs.

- 1 Identify what needs to be stored.
- 2 Choose from the internal fittings illustrated on the opposite page.
- 3 Calculate the minimum amount of height in modules that should be allowed for each internal fitting (1 module = 23mm). Please note that the module values assume standard size for lateral and suspension files.
- 4 Make sure you allow enough space for the height of the items to be stored on or in the internal fitting.
- 5 Add up the values to provide a total internal module height.
- 6 Then select from the five standard cupboard heights, choosing the one nearest to, but taller than, the total internal module height.
